

AUTOMATIC METER READING SOLUTIONS

Fully Managed AMR Solutions

STC are pioneers in providing commercial automatic meter reading solutions to retrieve electricity, gas and water data. We offer a unique fully managed service that includes all administration, project management, installations and sophisticated energy reporting.

We recognise that it is now essential for all businesses to monitor their energy. Having instant access to quality data is key to successful energy management and energy procurement.

Advancements in metering technology now allow companies to benefit from meters that use telecommunications to record their consumption. This allows accurate data to be stored, analysed and presented to a customer on demand. The ability to track your consumption on a day to day basis is the most cost effective way to identify energy waste and other problems that may lead to higher electricity charges.

Features

- /// All utilities monitored and stored at one source
- /// Self-funding proposals
- /// 30 years of metering expertise
- /// Nationwide coverage
- /// Products guaranteed and self-powered
- /// Remote programming
- /// On-demand data access using STC web portal service
- /// Specific energy alerts: E-mail and SMS alarm for abnormal usage
- /// 30 minute interval data stored and communicated
- /// Energy reports in any format
- /// Your total AMR solution

STC have driven the AMR market and have successfully installed meters and loggers for some of the UK's largest organisations. We can fully manage the service to meet your AMR requirements without unnecessary complexities. STC organise payment options, facilitate contracts with suppliers, manage installations and collect half hourly data.

The result is clean, accurate energy information presented to you on STC's award winning energy management web site.

MONITOR, MANAGE & SAVE

STC smartmeters and data loggers provide up-to-date information, enabling an instant overview of a company's energy and water operations at one source.

The main benefits include:

- /// Pin pointing waste early
- /// Eliminating estimated bills
- /// Reducing manual meter reading costs
- /// Only paying for what you use
- /// Tariff optimisation
- /// Minimising accruals
- /// Saving money

Electricity Smartmeters

Our smartmeters have been industry tested to provide accurate half hourly consumption data. Simple to install, the smartmeter replaces any sub 100 kW meter and proves a powerful solution for site management and usage profiling.

Once installed the readings are sent via GSM signal to energy settlements and your electricity supplier, for actual billing. The readings are also sent to your dedicated web site for analysis and energy reporting.

Data is made available on a day plus 1 basis, so that energy efficiency measures can be acted upon as soon as possible.

Identifying erratic use of energy, unnecessary night usage, high base loads and obvious seasonal waste will benefit your business and the environment.

Fact:
By reducing your base load by 1kW you can save £700 per meter per annum. (based on 8p/kWh)

Gas & Water Loggers

Our market leading gas and water loggers have been industry tested for over 10 years and there are now more than 20,000 loggers transmitting consumption data accurately.

Access to half-hourly data allows you to be in total control of your consumption at all times. Specific alarm parameters alert you to leaks and abnormal usage via text message or e-mail.

All web sites can be personalised for customers with their corporate logos and messages.

Comprehensive data analysis, data management and presentation is provided by STC's web portal
